$$\frac{\text{USERS AT BEGINNING OF PERIOD} - \text{USERS AT END OF PERIOD}}{\text{USERS AT BEGINNING OF PERIOD}} = \text{CHURN RATE}$$

**Business Objective:** Deploy customer retention strategies based on predictive insights to reduce customer churn

- Profitability
- Customer Satisfaction
- Customer Retention

# Customer Data (IBM Cognito Analytics)

- **Demographic information**

- Gender
- Senior Citizen
- Partnered/Single
- Dependents
- Location (Zip Code, lat/long)

- **Account information**

- Account Tenure
- Contract Length
- Paperless Billing
- Payment Method
- Monthly Charges
- Total Charges

- **Services**

- Core
  - Phone Service
  - Internet Service
- Add-ons
  - Multiple Lines
  - Online Security, Online Backup
  - Device Protection, Tech Support
  - TV Streaming, Movie Streaming

[Image Credit](#)

- **Target**

- Churn Status
- Churn Reason

# Current State of Affairs

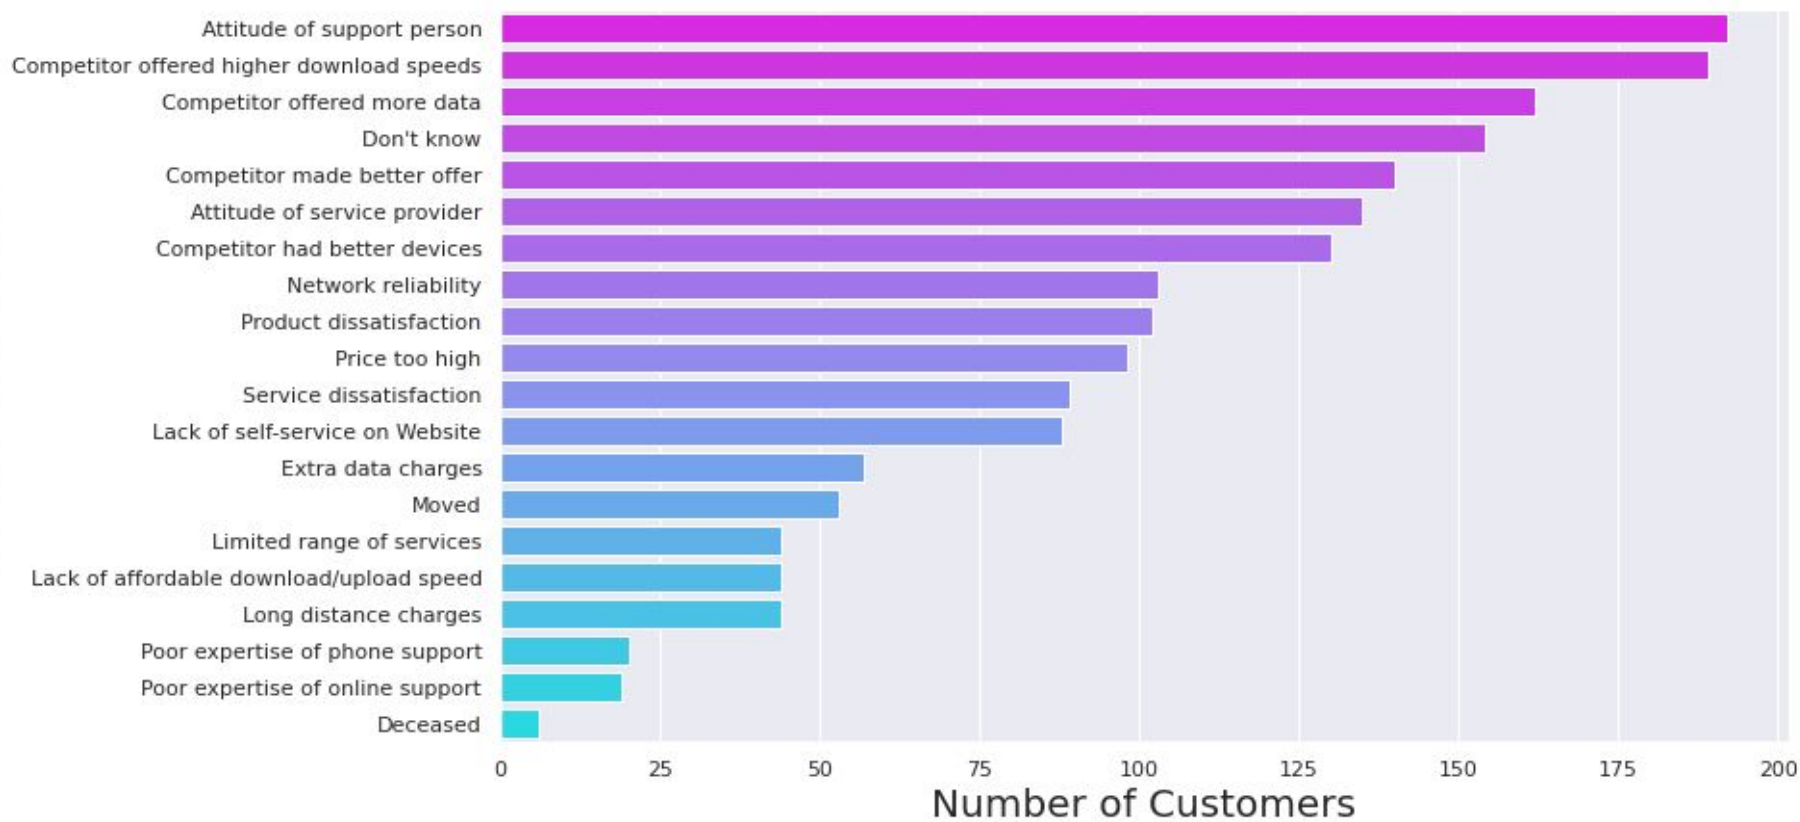

27% Churn Rate

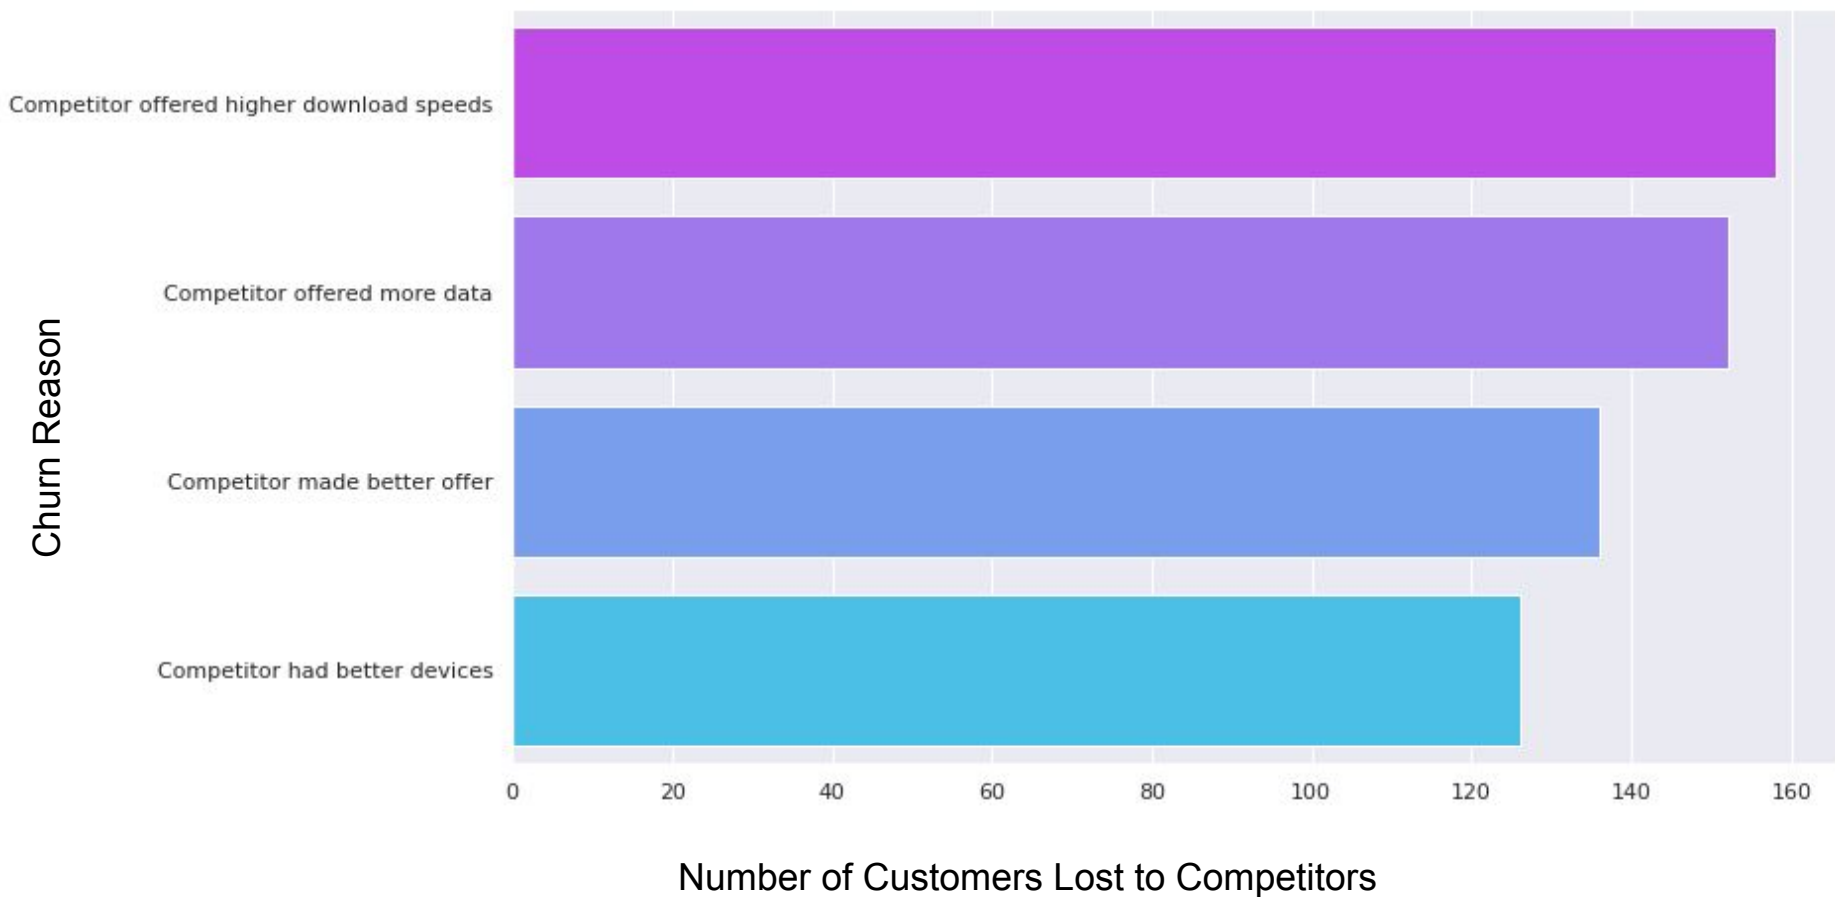

31% of monthly revenue is lost by churned customers.

Given Churn Reason

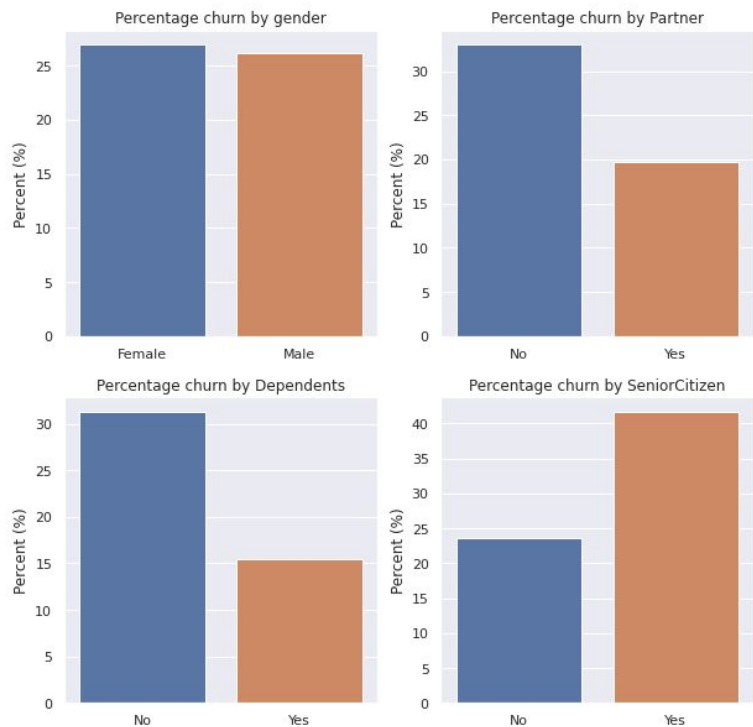

# Highest Churn Correlations

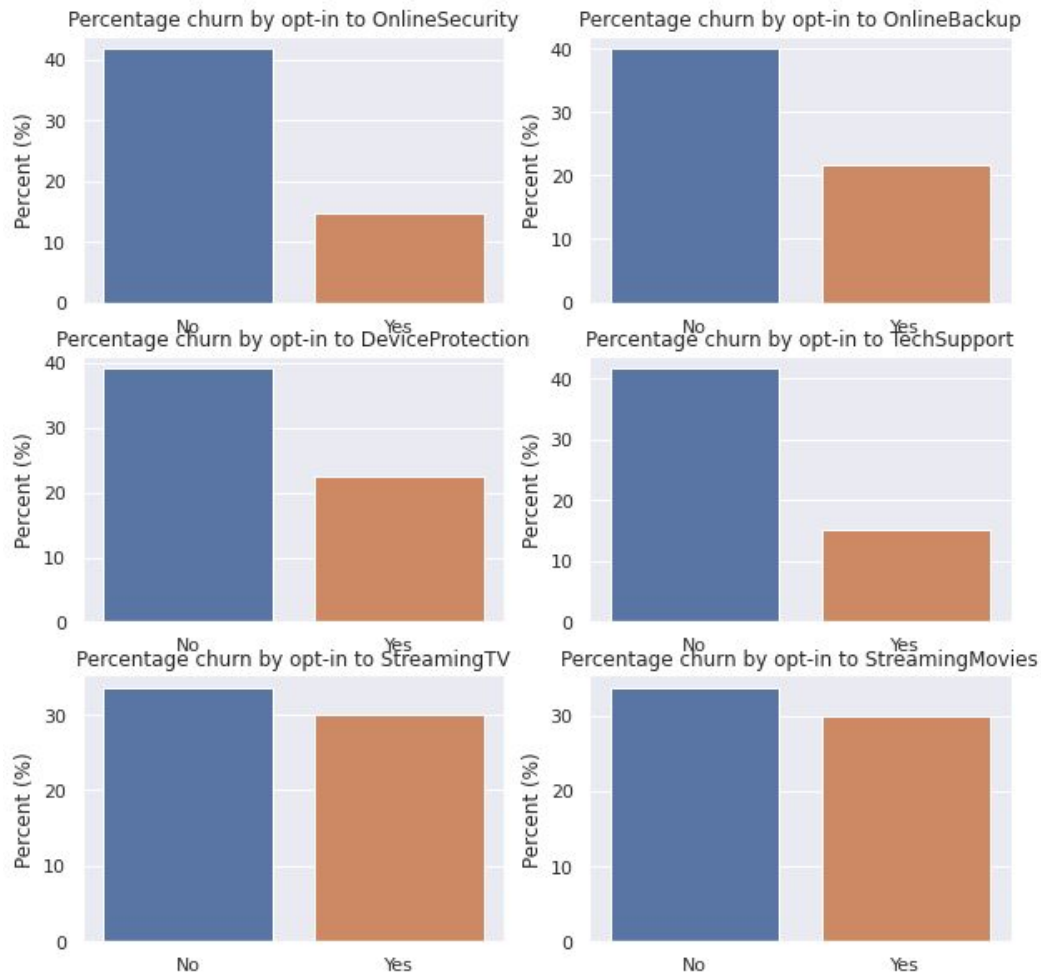

Churn Percentage by Demographic

Churn Percentage by Base Service

## Churn Percentage by all Internet Customers

# Production Model Metrics

Depending on the application...

<b>Model Number</b>	<b>Out of all churned customers, how many does the model actually predict?</b>	<b>Out of all predicted customers to churn, how many will actually churn?</b>	<b>Overall Accuracy</b>	<b>Possible Application</b>
1	83.3%	53%	75.5%	General, low-cost approaches
2	58%	68%	81.3%	Aggressive outreach

# Final Recommendations

- Expand Data Collection
  - Service Utilization, Devices, Customer Service Tickets
  - Demographics - Home Ownership, Income
  - Customer Lifetime Value and Engagement
- Competition Analysis
  - Download speeds, data, device offerings, upgrade/renewal offers
- Develop a 2-pronged outreach approach to those who are at risk of churning
  - General retention outreach with customers who have been predicted by wide-net model
  - Offer proactive discounts or add-on services to most-likely-to-churn customers predicted by a precise model

“Your most unhappy customers are your  
greatest source of learning.”

*- Bill Gates*
